Novel genes which are differentially regulated in prostate cancer, usef for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.

Claim 1; Page 413-414; 416pp; English.

The invention describes genes (I) which are differentially regulated in prostate cancer. (I) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where the number is indicative of the probability that the sample comprises prostate cancer. (I) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves determining the expression levels in a sample comprising prostate tissue of target genes which are differentially-regulated in prostate cancer.

CC (1) is also useful for identifying agents that modulate a biological activity of a polypeptide differentially regulated in prostate cancer cells, which involves contacting a polypeptide differentially regulated cativity of a polypeptide differentially regulated in prostate cancer cells with a test agent under conditions effective for the rest agent to modulate a biological activity of the polypeptide, and determining whether the test agent modulates the biological activity. (I) is useful as molecular markers, as drug targets, and for detecting, diagnosing, staging, assessing, monitoring, prognosticating, preventing or treating, datermining predisposition to diseases and conditions especially relating to prostate cancer. (I) and its expression products are used in the diagnostic test to assay for presence of cancer e.g., in tissue sections, in biopsy sample, in total RNA, in lymph, in blood etc. (I) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. (The polypeptide encoded by (I) can be used as target for therapy or drug discovery. (I) can also be used for expressing the polypeptide and thus cc for searching specific binding partners of the polypeptide and thus cc for searching specific binding partners of the polypeptide. (I) is useful contined and disease pathways and the delineation of targets in these control and disease pathways and the delineation of targets in these control and disease pathways and the delineation of targets in these control and disease pathways and the delineation of targets in these control and disease pathways and the delineation of targets in these control and disease pathways and the delineation of targets in these control and disease pathways and the delineation of targets in these control and disease pathways and the delineation of a protein differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EDMAKADKARYEREMKTYIPPKGETKKKFKDDNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

New isolated polypeptide having a vertebrate HWG A box, useful for inhibiting a condition associated with an activated inflammatory cytokine cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetea
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-naturally occurring HMG A box inhibits the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatorid arthritis, appendictis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, asthma, allergy, immune complex disease, sinusitis, bronchitis, embhysema, HVV infection, candidiasis, malaria, filariasis, amoebiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, enhits, dermatitis, and printiple sclerosis, gout, cerebral infarction, neutitis, Goodpasture's syndrome, graft-versus-host therapy. The present sequence is human HMGI (also termed as HMGBI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 EDMAKADKARYEREMKTYIPPKGETKKKKKODNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

This invention describes a novel method comprising using high mobility group B proteins (HMGB) as target molecules for development or preparation of compositions (for treatment, prevention or diagnosis of endometrial diseases, or as contraceptives. The products of the invention are used in kit for characterising the status of the endometrium, especially for presence of pregnancy or irregularities in the menstrual cycle. The proteins used in the invention can be HMGB! 2 or 3, or SP100-HMG, and the preferred interaction partner for HMGB! 1s RAGE (receptor for advanced glycation end products). The products of the invention have nuclear transcription factor complex and, extracellularly, a ligand for the surface RAGE (receptor for advanced glycation end products) which is involved in tumour metastasis. The products of the invention are used to develop treatments, preventions or diagnoses of endometrial disease, particularly endometrions or diagnoses of endometrial disease, particularly endometrions or polyps, hyperplasia or carcinoma of the endometrium, particularly for detecting pregnancy or mensitual disorders. This sequence represents the human HMGBl protein used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

This invention describes a novel method comprising using high mobility group B proteins (HMGB) as target molecules for development or group B proteins (EMGB) as target molecules for development or preparation of compositions (for treatment, prevention or diagnosis of endometrial diseases, or as contraceptives. The products of the invention are used in kit for characterising the status of the endometrium, corrected to presence of pregnancy or irregularities in the menstrual cycle. The proteins used in the invention can be HMGB1, 2 or 3, or ST100-KMG, and the preferred interaction partner for HMGB1, 2 or 3, or ST100-KMG, and the preferred interaction partner for HMGB1; saddE (receptor CC for advanced glycation end products). The products of the invention have gynaecological, contraceptive and cytostatic activity. HMGB is part of nuclear transcription factor complex and, extracellularly, a ligand for the surface RMGE (receptor for advanced glycation end products of the invention are used to cardinally endometrials or polyps, hyperplasia or carcinoma of the endometrium, also contraceptives and methods for assessing status of the endometrium, particularly for detecting pregnancy or menstrual disorders. This sequence represents the human HMGB1 protein used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     are associated with carcinomas. The sequences are useful for: (i) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vii) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for neutralizing the activity of CAP; (ix) as a biochip; (x) for diagnosing carcinoma; and or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CAP genes are useful as MAN vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586AI, for which no sequence data was published

This invention relates to a novel vaccine for promoting amyloid beta 42 aggregation inhibitory effect and/or amyloid beta 42 phagocytosis by microglia, which comprises a high mobility group protein 1 (HMG1), its partial peptide, or its salt. The invention may be useful for the production of compounds with a nootropic or neuroprotective activity acting as promoters of inhibition of amyloid beta 42 aggregation or promoters of amyloid beta 42 phagocytosis by microglia. The invention may also be useful for the production of a vaccine. The invention is useful for prophylaxis and/or treatment of Down's syndrome or amyloid angiopathy or preventing brain amyloidosis such as Alzeimer's disease. The present sequence is that of the protein encoded by the human high mobility group protein 1 (HMG1) gene which may be used during the creation of the novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
vaccine; amyloid beta 42 aggregation; amyloid beta 42 phagocytosis; microglia; high mobility group protein 1; HMG1; nootropic; neuroprotective; microglia; vaccine; Down's syndrome; amyloid angiopathy; brain amyloidosis; Alzheimer's disease; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EDMAKADKARYEREMKTYIPPKGETKKKPKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual. The composition individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box 1 (HMGI) that can be used to stimulate cytokine activity and increase immune response to assist in treating disease.

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to non-B conspitopes of HMGB, where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an artibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the playeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of an useful in treating obesity and conditions characterised by activation of an early and a method of the collypeptide.

degeneration, arthritis, endometriosis, histiocytosis, psoriasis, rosacca, eruptive or cavernous haemangioma, tumours (especially melanoma, Kaposi sarcoma and basal cell carcinoma), haemorrhoids, arteriosclerorists and basal cell carcinoma), haemorrhoids, arteriosclerorists, angina pectoris, ischaemia, infarction, infarcility, wounds (including diabetic and other ulcers), also diseases associated with DNA damage, especially xeroderma pigmentosum, 'leather skin', skin cancers and ageing (including where associated with sunburn) and cardiac infarct, including cosmetic treatment, especially as a sun-protection composition. Compounds identified as modulators of the specified processes can also be used therapeutically. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

The sequences and their encoded protein are useful for treating a very wide range of diseases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of nucleic acids encoding basic DNA-binding proteins, and their translation or transcription products, for treating diseases associated with e.g. anglogenesis, neovascularization or wound healing, also for
                                                                                                                                                                                                                                                                                                                        MCKGDPKKPRGKMSSYAFFVQTCREEHKKKHPDASVNFSEFSKKCSERWKTMSAKEKGKF

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide equences at least 80% identical to the TAT nucleic acids and polypeptide and polypeptide and polypeptide and polypeptide and polypeptide and enthods and compositions for the treatment or TAT polypeptide; and methods and compositions for the treatment or TAT polypeptide, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, carvical cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, inver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central cancer, pancreatic and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 120

```

The present invention relates to new vascular endothelial growth factor (VEGF) proteins useful for skin healing of a skin graft onto underlying tissue. The method involves contacting a skin graft flap or underlying tissue with an agent chosen from vascular endothelial growth factor C (VEGF-C) polynucleotides, vEGF-C polypeptides, VEGF-D polynucleotides, and vEGF-C polypeptides, VEGF-C polypeptides or reduce edema or increase perfusion at skin graft or flap. The composition comprises a gene therapy vector that encodes VEGF-C polynucleotide. The VEGF-C polypeptides or comprises the formula X-B-Z or Z-B-X, where X binds VEGF-C polypeptide comprises a heparin-binding amino acid sequence chosen from a prepro-VEGF-C sequence, and fragments that binds VEGF-3, where Z comprises a heparin-binding amino acid sequence, and B comprises a covalent attachment linking X to Z. The VEGF-D polypeptides, VEGF-C polypeptides, VEGF-D polymucleotides, and VEGF-D polypeptides, vEGF-C polypeptides, vEGF-D polymucleotides, and vEGF-D polypeptides, vEGF-C polypeptides, vEGF-D polymucleotides, and vEGF-D polypeptides, vEGF-C polymucleotides, vEGF-D polymucleotides, and vEGF-D polypeptides, vEGF-C polymucleotides, vEGF-D polymucleotides, 120 121 SIGDVAKKLGEMWNNTAADDKQPYEKKAAKLKEKYEKDIAAYRAKGKPDAAKKGVVKAEK 180 SIGDVAKKIGEMWINTAADDKQPYEKKAAKIKEKYEKDIAAYRAKGKPDAAKKGVVKAEK 180 Improving healing of skin graft or skin flap to underlying tissue useful in mastopexy, cosmetic surgery, abdominoplasty, involves using composition of vascular endothelial growth factor-C or D polynucleotides 9 9 1 MGKGDPKKPRGKMSSYAFFVQTCREEHKKCHPDASVNFSEFSKKCSERWKTMSAKEKGKF 61 EDMAKADKARYEREMKTYIPPKGETKKKFKDPNAPKRPPSAFFLFCSEYRPKIKGEHPGL 1 MGKGDPKKPRGKMSSYAFFVQTCREEHKKKHPDASVNFSEFSKKCSERWKTMSAKEKGKF Gaps Asko-Seljavaara ö Length 215; Indels Tammela T, Query Match 100.0%; Score 1149; DB 9; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to heparin-binding vascular endothelial growth factor receptor 3 (VEGFR-3) proteins and encoding polymucleotides. The heparin binding VEGFR-3 proteins are used for stimulating lymphangiogenesis or angiogenesis in a mammal, and for modulating the growth of mammalian endothelial cells, mammalian endothelial precursor cells or hematopoietic progenitor cells. The polypeptide may also be used for promoting recruitment, proliferation, differentiation, migration or survival of neuronal cells or neuronal precursor cells, and for treating neurodegenerative disorder, e.g. Alzheimer's diseases, Parkinson's disease, Huntington's disease, motor neuron disease, Amyotrophic Lateral Sclerosis (ALS), dementia, or cerebral palsy. The present sequence represents human amphoterin.
                                                                                                                                                                                                                                                                                                                                                                                                                                New heparin-binding Vascular Endothelial Growth Factor Receptor 3 ligands comprising prepro-VEGF-C, prepro-VEGF-D sequences or fragments, for treating neurodegenerative disorder, e.g. Alzheimer's, Parkinson's, or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid encoding a PRO polypeptide. The polypeptide, agonist or an antagonist, antibody, composition, and method are useful for diagnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatcid arthritis. The present sequence represents a DNA encoding a PRO

Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its immunosuppressive fragment

Claim 6; SEQ ID NO 1; 57pp; English.

The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB as 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural HMGB A box. The immune pathology is induced by the administration of a non-numan antigen, non-adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of protecting a subject against an immune pathology, inhibiting an immune pathology in an individual or decreasing an immune to comprising a vertebrate HMGB A box, a non-naturally-occurring HMGB A box.

Comprising a vertebrate HMGB A box, a non-naturally-occurring HMGB A box.

A claimed method of treating an autoimmune disorder in an individual

comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate in an individual

comprises administering a HMGB polypeptide comprises administering a HMGB D box, or an immunosuppressive fragment or an immunosuppressive and immunosuppressive and immunosuppressive and immunosuppressive and immunosuppressive a fragment of these, and a vertebrate or non-naturally-occurring HMGB Ebox. The HMGB polypeptide is preferably a HMGB peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis, psoritais or systemic lupus erythematosus (all claimed). The present sequence is that of the human HMGB protein, which can be used as the HMGB polypeptide in methods of the invention.

```
CC detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB A box but does not binding fragment) binds to a vertebrate HMGB A box but does not capecifically bind to non-A box epitopes of HMGB, and inhibits release of profein. A method of treating a condition characterized by activation of protein. A method of treating a condition characterized by activation of the invention, or its antigen-binding fragment. The condition is selected from a logarfat rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, gradically sepsis, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, and cachexia, especially sepsis, arthritis, or lupus. The present can dachexia, especially sepsis, arthritis, or lupus. The present can cachexia, especially sepsis, arthritis, or lupus. The present cachexia, especially sepsis, arthritis, or lupus.

XX Squence is also found in rat and mouse HMGB1.

Dhypoproper cachexia, especially sepsis, arthritis, or lupus.

Wolecular characterization of the canine HWGB1.";
Cytogenet. Genome Res. 101:33-38(2003).
-!- FUNCTION: Binds preferentially single-stranded DNA and unwinds double stranded DNA (By similarity).
-!- SUBCELULAR LOCATION: Noticer (By similarity).
-!- SIMILARITY: Belongs to the HMG1/HMG2 protein family.
-!- SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-MAY-2005 (Rel. 47, Created)

-I. FUNCTION: Binds preferentially single-stranded DNA and unwinds double stranded DNA.

-I. SUBCELLULAR DOCATION: Nuclear.

-I. SIMILARITY: Belongs to the HMG1/HMG2 protein family.

-I. SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                MEDLINE=84128872; PubMed=6141822;

-!- FUNCTION: Binds preferentially single-stranded DNA and unwinds
-!- function that has a role in double stranded DNA. Heparin-binding protein that has a role in double stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: Nuclear and also cytoplasmic, associated with the plasma membrane of filipodia in process-growing cells, and also deposited into the substrate-attached material. SIMILARITY: Belongs to the HMG1/HMG2 protein family. SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STRAIN-Sprague-Dawley;

-!- FUNCTION: Binds preferentially single-stranded DNA and unwinds double stranded DNA.
-!- SUBCELLUIAR LOCATION: Nuclear.
-!- SUMILARITY: Belongs to the HMG1/HMG2 protein family.
-!- SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tsuda K.-I., Kikuchi M., Mori K., Waga S., Yoshida M.;

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description

Patent No. 6822078

GENERAL INFORMATION:
APPLICANT: Ozaki, Shoichi
APPLICANT: Osayima Junko
APPLICANT: Okazaki, Takahiro
APPLICANT: Tanaka, Masao
APPLICANT: Tanaka, Masao
APPLICANT: Tanaka, Masao
APPLICANT: Shirakawa, Hitoshi
APPLICANT: Shirakawa, Hitoshi
APPLICANT: Shirakawa, Hitoshi
APPLICANT: Shirakawa, Pumio
TITLE OF INVENTION: DIAGNOSTIC DRUGS FOR AUTOIMMUNE DISEASES
FILE REFERENCE: 068383.0104
CURRENT FILING DATE: 1999-06-07

NUMBER OF SEQ ID NOS: 13
SEOTIN NO 3

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 63, 7
